

MHM Basics

Understanding your menstrual cycle is essential for self-care.

This guide explains the phases of the cycle and how to manage symptoms.

- Menstrual phase: bleeding starts and hormone levels drop.
- Follicular phase: the body prepares an egg with rising estrogen.
- Ovulation: the egg is released and fertility is highest.
- Luteal phase: hormone levels change preparing the uterus for pregnancy.

Track your symptoms, stay hydrated, and seek support when needed.
